"Aquamarina" by ISA – International Shipyards Ancona.

Yachtlite quality is unbeatable!
First-class workmanship "Made in Germany" –
The highest quality found in the harbours!

UV-resistant acrylic material guarantees no yellowing or ageing.

The position of each single LED is precisely calculated to provide smooth luminance. The LEDs are not visible in the acrylic.

This hull curvature was measured with a 3D-laser and the rear of the satined lettering manufactured accordingly.

The front element curves conversely providing constant material thickness.

Precise fitting accuracy between front and back element by CNC moulding cutter and laser shearing equipment.

Fronts can be made from stainless steel or many other materials. Also with PVD-coatings for easy cleaning and high durability.

Bevelled borders elegantly enhance light reflexion.
